

Powerful new features you have been looking for.

What's inside InsideView Version 5.0

insideview

ONE diagnostic software
you'll want to use.

Fleet View

Version 5.0 offers powerful functions to assess the status of an entire fleet of transformers. It gives you the tools to build customized metrics to evaluate, visualize and navigate critical fleet information.

Dashboard View

The dashboard is a customized view of the current status, current values and pending actions for your fleet. It is both an interactive tool to navigate and access relevant real-time information and is also a planning tool to stay in control of follow-up.

Statistics View

Statistics give you the power to perform statistical analysis of all historical data of each asset, enabling you to generate specific thresholds for a group of assets. Statistics give you the ability to highlight outliers, reuse past experience, discovering behaviour patterns to identify and manage problems rapidly.

Advantages

- Save time: InsideView centralizes oil test data and makes it easily available. You can now generate comprehensive metrics to assess fleet management available at all organizational levels. Answers are just a few clicks away.
- Manage risk proactively: assess your transformer condition using different methods (DGA Report, Oil Quality Report, Paper Degradation Report).
- Make informed decisions: calculating diagnostics based on asset characteristics and combining data from several sources, graphical trending.

See the new features in action. Try our hands-on demo.

If we have sparked your interest and you would like to get hands-on, we would be pleased to let you test out a demo. See how a situation evolves using our live simulator.

Contact us so we can talk you through.
