

Morgan Schaffer upgrades the Calisto family

Meet the new Calisto 501 and Calisto 901

ONE series of DGA monitors
you'll want to use.

Reliability

You talked.
We listened.

The new Calisto 5 and 9 models offer you the reliability you need in a DGA online monitor.

Design improvements, highest quality components, stringent manufacturing processes and rigorous product testing give you more robust equipment that requires less routine maintenance, and protects you against false alarms.

- New carrier gas manifold, factory-installed for trouble-free start-up and convenience
- New calibration gas cylinder, which is easier to connect, making installation more reliable
- Enhanced self-diagnostics

Total cost of ownership

Significantly improved reliability translates into reduced cost of ownership due to fewer interventions.

The new Calisto 501 and 901 feature:

- Doubled lifetimes for calibration and carrier gas cylinders – essentially maintenance-free consumables: **a big cost advantage for operators.**

Plus!

You get more flexibility with optional communication cards to tailor the product to your needs.

Performance

The new C501 and C901 offer the same unbeatable performance as earlier C500 and C900 models, featuring market-leading lower detection limits (LDL) together with a very broad measurement range to ensure that you have all the information you need to detect and diagnose faults as early as possible.

- Market-leading detection limits for detecting and identifying faults at their earliest onset.
- Improved chromatographic performance with 80 minute basic measurement cycle.
- Best-in-market accuracy benchmarked by clients, DGA labs and industry working groups.

Contact
